SUMMARY

Analytical and detail-oriented engineer with strong experience in requirement gathering, system design, and data-driven decision making. Skilled at bridging technical and non-technical stakeholders, translating business requirements into functional solutions, and coordinating cross-functional project delivery. Passionate about process improvement and scalable system design.

SKILLS

Business Analysis: Requirement Gathering, BRD/SRS Documentation, Process Mapping, Stakeholder Communication, Project Coordination

Data & Analytics: SQL, Data Analysis, Excel/Google Sheets, D3.js (visualization), Forensic Analytics

Technical: JavaScript, Python, REST APIs, MongoDB, PostgreSQL, Postman, Git

Design: Wireframe Understanding, Figma (basic), UI/UX Feedback & Iteration

EXPERIENCE

Software Engineering Intern - Future Kmuniti

Jun 2025 – Jul 2025

- Gathered and analyzed system performance requirements, coordinating with stakeholders to define and implement API improvements that reduced backend latency by 20%. [Verify](#)
- Documented and optimized SQL/NoSQL query requirements across services, improving data retrieval speeds by 35%.

Data Analytics Job Simulation - Deloitte

Mar 2026

- Analyzed 50k+ rows of business data to identify 3 key operational bottlenecks; prepared structured findings and recommendations improving efficiency by 15%. [Verify](#)
- Applied forensic analytics to detect financial discrepancies with 98% accuracy.

Software Engineering Job Simulation - JPMorgan Chase & Co.

Mar 2026

- Analyzed and documented requirements for financial dashboards; refactored API logic increasing data processing speed by 25%. [Verify](#)
- Ensured 85%+ code coverage through systematic testing and validation — aligning system behavior with documented business requirements.

PROJECTS

SuiteSpot | Full-Stack Property Platform

[GitHub](#) | [Live](#)

- Gathered user feedback to identify need for visual travel discovery; documented requirements and coordinated end-to-end delivery of a D3.js 3D globe feature.
- Defined performance requirements and validated outcomes — achieved 40% faster listing load, improving user satisfaction measurably.

StockBridge (Zerodha Clone) | Fintech Platform

[GitHub](#) | [Live](#)

- Translated complex trading workflow requirements into a scalable dual-app architecture supporting 100+ simulated market assets.
- Documented and validated API behavior through unit and integration tests, ensuring system aligned with defined business logic and edge cases.

VertexConnect | Real-Time Communication Platform

[GitHub](#) | [Live](#)

- Defined system requirements for sub-200ms P2P latency and 99.9% availability; coordinated iterative UI improvements based on usability testing feedback.

EDUCATION

Rajasthan Technical University

Aug 2022 – Present

B.Tech in Computer Science – CGPA: 8.8 / 10.0

Kota, India

Relevant Coursework: Data Structures & Algorithms, Artificial Intelligence, Data Science & Big Data Analytics, Database Management, Computer Networks, Object-Oriented Programming
